# BIMLOQ

Business Models Optimization for Quality

## Integration scope

# Motivation

## Aspects of the visual/logical gap in Business Process Management

### ■ Semantic:

- lack of a common ontology
- lack of unified semantics
- difficult unambiguous logical representation
- lack of clear declarative model specification suitable for logical analysis

### ■ Functional:

goals and tasks in the Business Logic layer cannot be mapped to logical quality assessment methods

### ■ Technical:

technologies used in the visual design layer are incompatible with the declarative logical representation

# BIMLOQ Overview

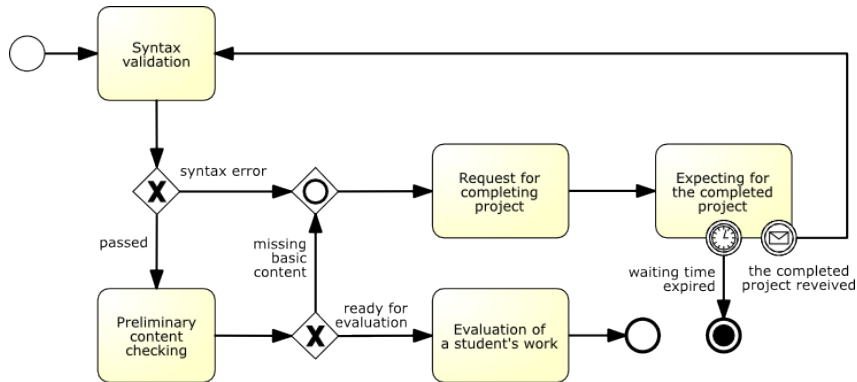

## Objectives

- Development of a declarative logical model for Business Processes
- Integration of Business Processes with Business Rules
- Quality characteristics for Business Processes
- Analysis and optimization of Business Processes for safety, reliability and quality assurance

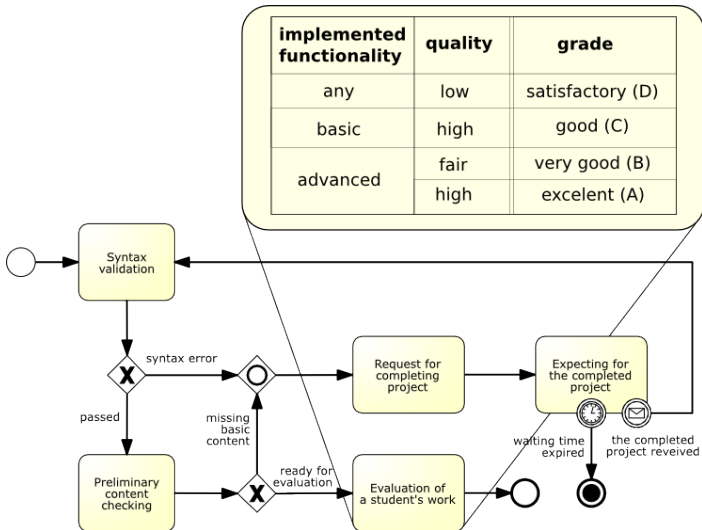

## Technologies

- **Modeling:** BPMN modeling tools
- **Analysis:** Verification tools, such as ProM, YAWL, Petri nets, etc.
- **Runtime:** HeaRT (HeKatE Runtime Environment)

## An example of a BPMN model

# An example of a BPMN model with rules

# 3 approaches to Business Processes

## Modeling

Integration of the HeKatE tools with a selected BPMN tools

## Analysis

2 levels are considered

- local verification (for BPMN elements as well as rule tables in BPMN tasks)
- global verification (for BPMN models)

## Runtime

Application of the HearT rule engine for executing selected BPMN models

# BIMLOQ Output

## Expected Benefits

- Instant Business Process quality assessment during development
- Maintainability assurance
- Formal analysis of Business Processes
- High adaptability in dynamic environments

## Intended Results

- **Conceptual:** declarative model specification for logical Business Process representation and analysis
- **Practical:** new tools for analysis and optimization of specification quality, integration of visual BPMN tools and logical knowledge processing
- **Evaluative:** modeling and analysis of real-life application use cases

# Business Process modeling notations

## Business Process Notations

- BPMN (Business Process Modeling Notation) – <http://www.bpmn.org/>
- EPC (Event-Driven Process Chain)
- UML (Unified Modeling Language) – <http://www.uml.org>
- IDEF0 – <http://www.idef.com/>
- Petri Nets – <http://www.informatik.uni-hamburg.de/TGI/PetriNets/>

# Business Process execution languages

## Executable languages

- BPEL (Business Process Execution Language) –

# HeKatE software resources

Tools developed under the HeKatE research project:

## Modeling

- HQEd (HeKatE Qt Editor) for XTT2

## Analysis

- HeaRT (HeKatE RunTime)
- HaVA (HeKatE Verification and Analysis)

## Runtime

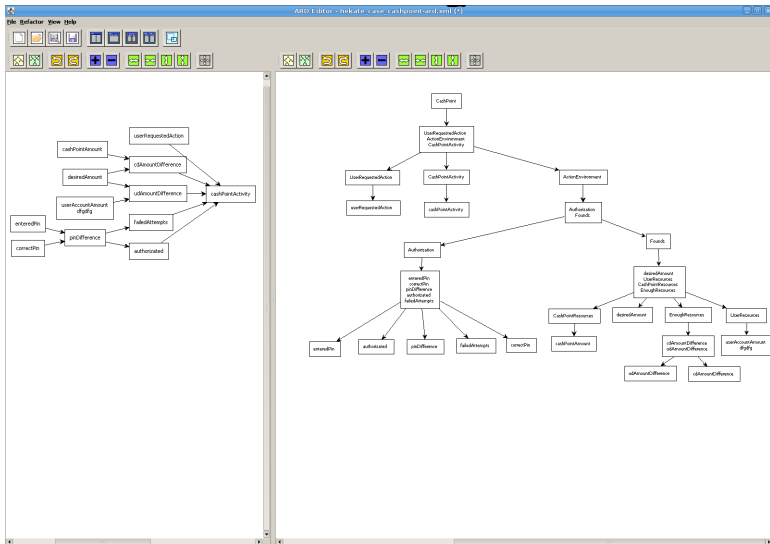

- HeaRT (HeKatE RunTime)
- DEPfH (Drools Export Plugin for HQEd)

See: [hekate.ia.agh.edu.pl](http://hekate.ia.agh.edu.pl)

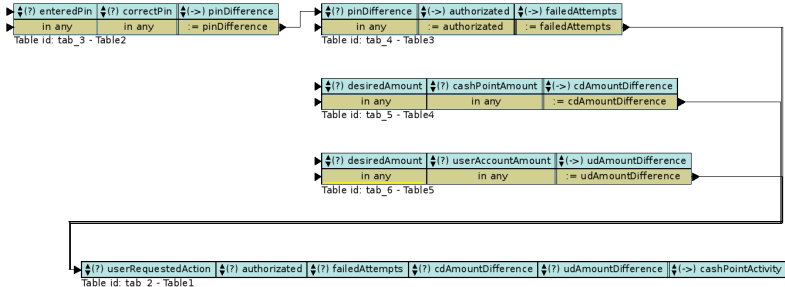

# Outline

- 1 Introduction
- 2 Project overview
- 3 HeKatE**
- 4 BPMN
- 5 Rules and processes integration approaches
- 6 BIMLOQ tasks

# HJEd

# ARD+ $\longrightarrow$ XTT2

# HQEd

The screenshot displays the HQEd (HeKatE Query Editor) interface. The main workspace shows a BPMN diagram with several tasks:

- Table id: tab\_3 - Table2**: A task with conditions  $\{?\} pinDi$  and  $\{?\} autho$ , and actions  $\{->\} faile$ . It contains a table with columns  $\{=\} 0$ ,  $\{:=\} false$ , and  $\{:=\} add(faile,1)$ .
- Table id: tab\_5 - Table4**: A task with conditions  $\{?\} desir$  and  $\{?\} userA$ , and action  $\{->\} udAmo$ . It contains a table with columns  $\{=\} any$ ,  $\{:=\} any$ , and  $\{:=\} sub(userA, desir)$ .
- Table id: tab\_6 - Table5**: A task with conditions  $\{?\} cash$  and  $\{?\} desir$ , and action  $\{->\} cdAmo$ . It contains a table with columns  $\{=\} any$ ,  $\{:=\} any$ , and  $\{:=\} sub(cash, desir)$ .
- Table id: tab\_2 - Table1**: A task with conditions  $\{?\} autho$ ,  $\{?\} faile$ ,  $\{?\} userR$ , and  $\{?\} udAmo$ . It contains a table with columns  $\{=\} false$ ,  $\{<\} 3$ ,  $\{=\} any$ ,  $\{=\} any$ ,  $\{=\} true$ ,  $\{=\} any$ ,  $\{=\} balance$ ,  $\{=\} any$ ,  $\{=\} true$ ,  $\{=\} any$ ,  $\{=\} withdraw$ ,  $\{>= \} 0.0000000000$ ,  $\{>= \}$ ,  $\{=\} true$ ,  $\{=\} any$ ,  $\{=\} withdraw$ ,  $\{=\} any$ ,  $\{=\} true$ ,  $\{=\} any$ ,  $\{=\} withdraw$ ,  $\{< \} 0.0000000000$ , and  $\{>= \}$ .

The console window at the bottom shows the following execution logs:

```

information: No errors found.
Message filter:
Message control:
Information: in table 'table3', table5.
Information:
Information: in table 'table3', row 1, col 1: executing cell'table3.1.1' - return code: true
Information: in table 'table3', row 1, col 2: executing cell'table3.1.2' - return code: true
Information: in table 'table3', row 1, col 3: executing cell'table3.1.3' - return code: true
Information: in table 'table3', row 1, col 1: executing cell'table3.1.1' - return code: false
  
```

The detected plugins' events window shows the following error messages:

```

Detected plugins' events:

- Task 49: 100 euro demand, 100 euro demand, 1 not enough with Cashpoint
- Task 50: 100 euro demand, 100 euro demand, 1 not enough with Cashpoint
- Task 51: 100 euro demand, 100 euro demand, 1 not enough with Cashpoint
- Task 52: 100 euro demand, 100 euro demand, 1 not enough with Cashpoint
- Task 53: 100 euro demand, 100 euro demand, 1 not enough with Cashpoint
- Task 54: 100 euro demand, 100 euro demand, 1 not enough with Cashpoint
- Task 55: 100 euro demand, 100 euro demand, 1 not enough with Cashpoint
- Task 56: 100 euro demand, 100 euro demand, 1 not enough with Cashpoint
- Task 57: 100 euro demand, 100 euro demand, 1 not enough with Cashpoint
- Task 58: 100 euro demand, 100 euro demand, 1 not enough with Cashpoint
- Task 59: 100 euro demand, 100 euro demand, 1 not enough with Cashpoint
- Task 60: 100 euro demand, 100 euro demand, 1 not enough with Cashpoint
- Task 61: 100 euro demand, 100 euro demand, 1 not enough with Cashpoint
- Task 62: 100 euro demand, 100 euro demand, 1 not enough with Cashpoint
- Task 63: 100 euro demand, 100 euro demand, 1 not enough with Cashpoint
- Task 64: 100 euro demand, 100 euro demand, 1 not enough with Cashpoint
- Task 65: 100 euro demand, 100 euro demand, 1 not enough with Cashpoint
- Task 66: 100 euro demand, 100 euro demand, 1 not enough with Cashpoint
- Task 67: 100 euro demand, 100 euro demand, 1 not enough with Cashpoint
- Task 68: 100 euro demand, 100 euro demand, 1 not enough with Cashpoint
- Task 69: 100 euro demand, 100 euro demand, 1 not enough with Cashpoint
- Task 70: 100 euro demand, 100 euro demand, 1 not enough with Cashpoint
- Task 71: 100 euro demand, 100 euro demand, 1 not enough with Cashpoint
- Task 72: 100 euro demand, 100 euro demand, 1 not enough with Cashpoint
- Task 73: 100 euro demand, 100 euro demand, 1 not enough with Cashpoint
- Task 74: 100 euro demand, 100 euro demand, 1 not enough with Cashpoint
- Task 75: 100 euro demand, 100 euro demand, 1 not enough with Cashpoint
- Task 76: 100 euro demand, 100 euro demand, 1 not enough with Cashpoint
- Task 77: 100 euro demand, 100 euro demand, 1 not enough with Cashpoint
- Task 78: 100 euro demand, 100 euro demand, 1 not enough with Cashpoint
- Task 79: 100 euro demand, 100 euro demand, 1 not enough with Cashpoint
- Task 80: 100 euro demand, 100 euro demand, 1 not enough with Cashpoint
- Task 81: 100 euro demand, 100 euro demand, 1 not enough with Cashpoint
- Task 82: 100 euro demand, 100 euro demand, 1 not enough with Cashpoint
- Task 83: 100 euro demand, 100 euro demand, 1 not enough with Cashpoint
- Task 84: 100 euro demand, 100 euro demand, 1 not enough with Cashpoint
- Task 85: 100 euro demand, 100 euro demand, 1 not enough with Cashpoint
- Task 86: 100 euro demand, 100 euro demand, 1 not enough with Cashpoint
- Task 87: 100 euro demand, 100 euro demand, 1 not enough with Cashpoint
- Task 88: 100 euro demand, 100 euro demand, 1 not enough with Cashpoint
- Task 89: 100 euro demand, 100 euro demand, 1 not enough with Cashpoint
- Task 90: 100 euro demand, 100 euro demand, 1 not enough with Cashpoint
- Task 91: 100 euro demand, 100 euro demand, 1 not enough with Cashpoint
- Task 92: 100 euro demand, 100 euro demand, 1 not enough with Cashpoint
- Task 93: 100 euro demand, 100 euro demand, 1 not enough with Cashpoint
- Task 94: 100 euro demand, 100 euro demand, 1 not enough with Cashpoint
- Task 95: 100 euro demand, 100 euro demand, 1 not enough with Cashpoint
- Task 96: 100 euro demand, 100 euro demand, 1 not enough with Cashpoint
- Task 97: 100 euro demand, 100 euro demand, 1 not enough with Cashpoint
- Task 98: 100 euro demand, 100 euro demand, 1 not enough with Cashpoint
- Task 99: 100 euro demand, 100 euro demand, 1 not enough with Cashpoint
- Task 100: 100 euro demand, 100 euro demand, 1 not enough with Cashpoint

On the right, a 'Select a value' dialog box is open, showing 'CashPointAmount: 2000' and a 'Select' button. Below it, a 'Enter PIN' dialog box is visible, showing a numeric keypad with digits 1-9, 0, and a backspace key.

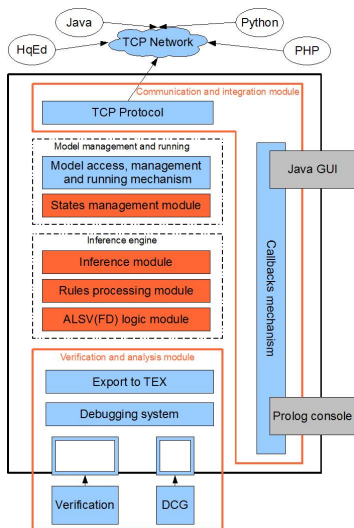

## Drawbacks of ARD+

- Limited expressiveness
- Non extensible
- Compatibility problems
- Lack of tools

## Advantages of XTT2

- Based on the expressive ALSV(FD) logic
- Formal rule language
- Visual design
- Structured rule base
- Advanced inference control
- Formal verification

# HeaRT architecture

# HMR rule representation

↕ (?) diagn	↕ (?) aller	↕ (?) age	↕ (->) medic
= AcuteSinusitils	= none	> 17	:= Amoxicillin
= AcuteSinusitils	= none	<= 17	:= Cefuroxime
= AcuteSinusitils	= penicillin	= any	:= Levofloxacin

Table id: tab\_2 - Table1

```

xschm 'Table1': [diagnosis,allergic,age] ==> [medication].

xrule 'Table1'/1:
  [diagnosis eq 'AcuteSinusitils',
   allergic eq none,
   age gt 17]
  ==>
  [medication set 'Amoxicillin']
  : 'Table2'.

xrule 'Table1'/2:
  [diagnosis eq 'AcuteSinusitils',
   allergic eq none,
   age lte 17]
  ==>
  [medication set 'Cefuroxime'].

xrule 'Table1'/3:
  [diagnosis eq 'AcuteSinusitils',
   allergic eq penicillin,

```

## Advantages of HeaRT

- Supports reasoning in modularized knowledge databases
- Implements four different inference strategies dedicated to take advantages of modularized knowledge bases
- Uses fast Prolog Unification algorithm instead of RETE
- Supports HMR language which is formal notation of rule-based systems based on XTT tables
- Allows for logical verification based on ALSV(FD)

# HeKatE software resources

Tools developed under the HeKatE research project:

## Modeling

- HQEd (HeKatE Qt Editor) for XTT2

## Analysis

- HeaRT (HeKatE RunTime)
- HaVA (HeKatE Verification and Analysis)

## Runtime

- HeaRT (HeKatE RunTime)
- DEPfH (Drools Export Plugin for HQEd)

# Outline

- 1 Introduction
- 2 Project overview
- 3 HeKatE
- 4 BPMN**
- 5 Rules and processes integration approaches
- 6 BIMLOQ tasks

# Business Process Modeling Notation

## BPMN

- readily understandable by all business users
- single specification for a Business Process Model
- currently provides several diagrams,  
mainly used: Business Process Diagram
- to define internal and external business procedure

## NOT for

- Organizational structures
- Functional breakdowns
- Data models

# BPMN history

**Aug 2001** Formation of Notation Working Group

**Nov 2002** BPMN 0.9 Draft of specification

**May 2004** BPMN 1.0 specification

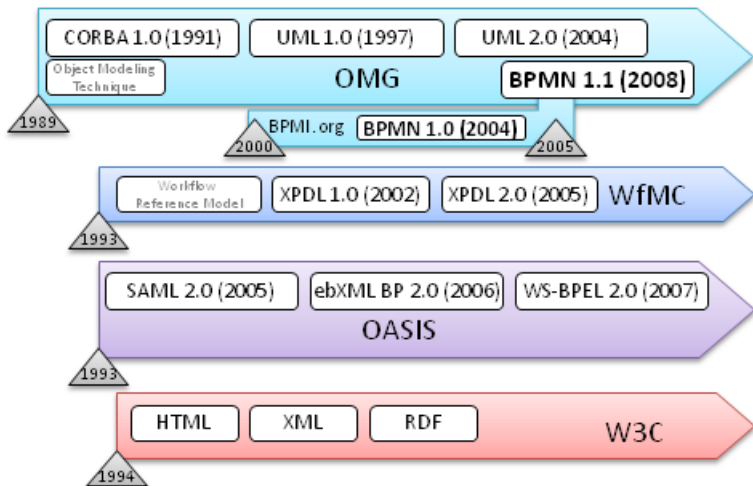

**Jun 2005** Merger with OMG

**Jan 2009** BPMN 1.2

**Aug 2009** BPMN 2.0 Beta 1

**Jan 2011** BPMN 2.0

# BPMN history

# Business Process

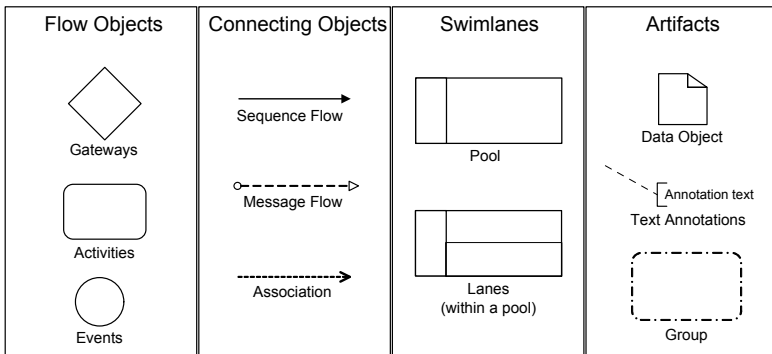

## What is Business Processes (BP)?

A **collection** of related, structured **activities/tasks** that **produce** a specific **service/product** (serve a particular goal) for a particular customer.

## Business Process Analysis

- Business Process Model defines the ways in which operations are carried out to accomplish the intended objectives of an organization
- Business Process can be decomposed into several sub-processes, which contribute to achieving the goal of the super-process
- Business Process Analysis typically includes the mapping of processes and sub-processes down to activity level

# Core Set of Diagram Elements

# Event elements

## Events

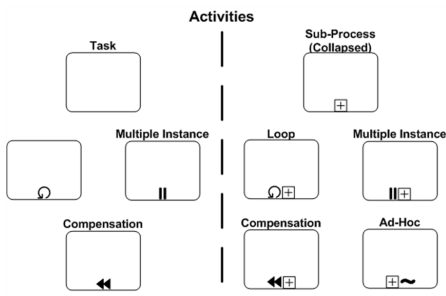

- happen during the course of a business process
- affect the process flow and usually have a trigger or a result
- can start, interrupt, or end the flow

# Activity elements

## Activities

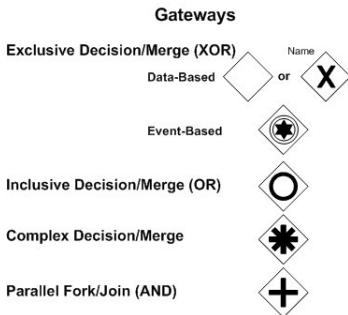

- work that is performed within a business process
- can be atomic or compound
- types: process, sub-process, and task

# Gateway elements

## Gateways

Gateways are used to control how sequence flows interact as they converge and diverge within a process.

# Connection

## Flow/Connections

**A Sequence Flow** - shows the order in which activities are performed

**A Message Flow** - shows the flow of messages between two entities that are prepared to send and receive them

**An Association** - associates information and artifacts with flow objects

# Swimlanes

## Swimlanes

- A Pool** - a graphical container for partitioning a set of activities from other pools, usually in the context of B2B situations
- A Lane** - a sub-partition within **a pool**, extends the entire length of the pool, either vertically or horizontally

# Artifacts

## Artifacts

**Data Objects** - provides information about how documents, data, and other objects are used and updated within a process

**Text Annotations** - mechanism for a modeler to provide additional information for the reader of a BPMN diagram

**Groups** - provide a mechanism to visually organize activities

Data Object

Text Annotation

Group

# BPMN tools

## According to OMG (updated March 1, 2011)

- 76 BPMN implementations
- 4 planned

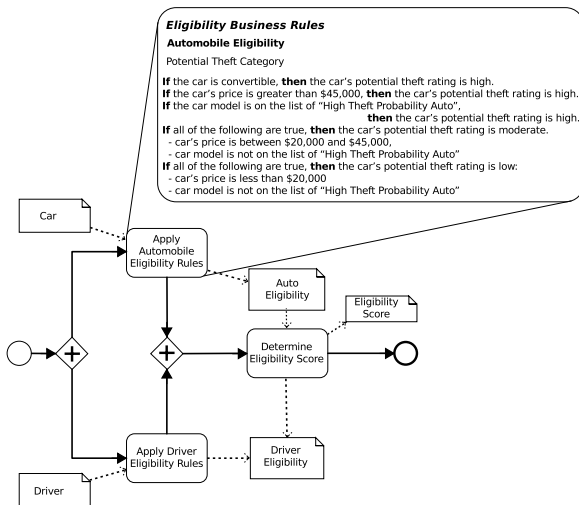

## Evaluation in progress
